1. The first group of authors (e.g., [1, 2]) considers the problem of the stability of the motion of a system of particles in the field of a central force. The authors of [1, 2] show that the motion of a system of particles in the field of a central force is stable if the potential energy of the system is a function of the distance from the center of mass of the system to the center of force.

[illegible]
$$V = \{x \in \mathbb{R}^n : x_1 \leq x_2 \leq \dots \leq x_n\} \quad \text{and} \quad W = \{x \in \mathbb{R}^n : x_1 \geq x_2 \geq \dots \geq x_n\}.$$

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1. The first part of the paper is devoted to the study of the problem of the existence of a solution of the system of equations (1) for the case of a linear operator A . It is shown that the system (1) has a solution if and only if the matrix A is nonsingular. The second part of the paper is devoted to the study of the problem of the existence of a solution of the system of equations (1) for the case of a nonlinear operator A . It is shown that the system (1) has a solution if and only if the matrix A is nonsingular and the operator A is continuous.
